

Use the format for submitting assignments uploaded in Moodle. The word limit is 1000.

---

This is the final assignment for the course. But it is not strictly an “assignment”. You are required to give your own feedback about the course. Although you may write whatever you want, your responses to the following questions will help improve the content and conduct of the course for students taking the course next year.

- (1) What were your ideas about Ethics when you signed up for the course and how have they changed in the past four months?
- (2) Do you think the course content is adequate for a one-semester course like this? What were some topics you wish was included?
- (3) What was the most interesting topic and the most boring topic?
- (4) Do you think the course should have spent more time discussing applied ethics?
- (5) Is it better to have something like an “Ethics of technology” or “Ethics of AI” course instead of a general ethics course like the one we have had?
- (6) Did the assignments and mid/end semester exam questions make you think creatively and productively or do you think they were either too easy to answer or too hard to even start thinking about them?
- (7) Is a course like philosophical ethics better than the Value Education courses (VE-I and VE-II) that you had to take earlier? If yes, do you think we should scrap VE? If No, what does VE bring that perhaps cannot be undertaken in an Ethics course?
- (8) Given the course outline and readings, do you think you would have had a similar or perhaps a better learning experience if you had gone on your own (reading material on the internet, watch videos, etc.) without attending classes?
- (9) How can teaching and interaction with students be improved, and how to better make use of services like Moodle and Microsoft Teams?
- (10) Which other philosophy course would you be interested in taking? Some options: Philosophy of Cognitive Science, Philosophy of Science, Critical thinking in an age of (mis)Information, Classical Greek Philosophy, History of Western Philosophy, Minds Machines and Algorithms, Philosophy of Artificial Intelligence, Introduction to Metaphysics and Epistemology. You can mention courses not included in this list.
